

AI strategy, systems and implementation

Studio Baggio helps businesses identify where AI can create measurable value, then designs, builds and implements the systems needed to deliver it.

This can mean improving how a team works, generating new client demand, increasing visibility across Google and AI platforms, or designing and building the websites, tools, client resources and specialist software the business needs.

HOW AN ENGAGEMENT WORKS

01 Start with focused discovery

Most engagements begin with a two- to three-week audit of the current position, producing a prioritised plan: what to implement first, what can wait and how success is measured.

Audit fees are fully credited against implementation or ongoing consultation.

02 Build and implement

Implement the plan internally, with existing partners, or appoint Studio Baggio to design, build and embed the recommended systems, processes and client-facing resources.

03 Ongoing AI partner

Priority advice, optimisation and practical support, developing the strategy and taking new opportunities as the business grows.

What you can hire Studio Baggio for

Growth Infrastructure & Visibility

Audit client demand, positioning and current visibility, then define how the website, content, evidence, client-facing resources and lead capture should work together to generate new business: qualified enquiries, instructions and revenue.

SEO & AI Search

Identify the client questions with the greatest commercial value, then position the business to be found first on Google, cited in AI search and recommended as the solution when prospective clients ask them.

AI Operating Systems

One company-wide AI system built around how your people work and how value is delivered to clients: shared knowledge, role-specific capabilities and workflows, built on the infrastructure you already use.

Bespoke Software & Systems

Design and build websites, client-facing tools and resources, internal systems and specialist software for valuable problems that off-the-shelf tools cannot solve.

Growth Infrastructure & Visibility

For businesses that want to generate more new and repeat revenue from their expertise, relationships and existing client base.

We audit how the business is currently positioned, discovered and chosen, across search, AI platforms, referrals and professional relationships, then define how positioning, client-facing resources, lead capture and follow-up work together as one repeatable system for creating qualified enquiries and revenue.

WHAT THE AUDIT COVERS

- Market, competitor and client-demand research, including the high-value searches and questions prospective clients ask.
- Commercial positioning and differentiators.
- Current discoverability across Google and AI search, including competitor visibility and the external sources shaping results.
- Website structure, messaging, technical performance, content and evidence gaps.
- Recommendations for client-facing guides, diagnostics and tools, including how engagement is captured and used.
- Lead capture, qualification and follow-up, including the route from discovery or introduction to a qualified enquiry.

The output is a commercial blueprint with a sequenced implementation and measurement plan, implemented internally, with existing partners or by Studio Baggio.

EXAMPLE

A chartered financial planner who had previously relied entirely on referrals won nine new clients in eight months, adding **£5.3 million in assets under management and £93,400 in first-year revenue**. Four of those client journeys began with a ChatGPT recommendation.

SEO & AI Search

The focused starting point: for businesses that are over-reliant on referrals or are not being found when prospective clients search for their expertise.

Engagements begin with a focused SEO and AI Search Audit. We identify the highest-value demand the business is missing, then define the pages, authority, content and technical changes needed to be found first on Google, cited in AI search and chosen.

WHAT THE AUDIT COVERS

- High-value client searches and questions.
- Current Google and AI-search visibility.
- Competitor and citation performance.
- Technical, content and authority gaps.
- Priority pages and site structure.
- Implementation and measurement plan.

The output is a clear action plan the business can implement internally or appoint Studio Baggio to deliver.

“SEO & AI SEO were something we were never able to master. Jayme changed that completely: we went from page four to first on Google - above Microsoft, and we show up in AI search for the key buyer questions our customers ask. The advantage this gives us is invaluable.”

Result: **more than 20 additional enquiries through AI search within two weeks.**

Emma Corbett · Product Specialist and Co-founder, Get-Planner

AI Operating Systems

For businesses that want a company-wide AI system built around how their people work and how value is delivered to clients.

We examine the company's teams, roles, knowledge and ways of working to identify the highest-value opportunities, then define the shared context, role-specific capabilities, processes and safeguards the system needs, built on the company's existing infrastructure.

WHAT THE AUDIT COVERS

- Where AI can create the greatest measurable value.
- The shared knowledge and role-specific capabilities the system needs.
- Role-specific recommendations and a sequenced 30 and 90-day plan.
- A structure for valuable workflows to be shared, retained and improved across the team.
- Client experience: how advice and client outputs are delivered, with recommendations to make them clearer, more personal and more valuable.
- What should be implemented first and where not to invest yet.

The result is a prioritised 30- and 90-day implementation plan, not a review of individual tools or a generic training programme. The business can implement it internally, work with its existing partners or appoint Studio Baggio to design, build and embed the full system.

EXAMPLE

Studio Baggio designed and implemented a company-wide AI system for a London creative agency. Built around the company's knowledge, clients, brand and ways of working, it understood each person's role and gave a non-technical team the context, guidance, tools and capabilities to use AI effectively from day one, without the need for separate training. The system retains useful learning, turns successful work into shared processes and identifies new ways to support the team, becoming more valuable as the business grows. It is estimated to save **10-15 hours+ each week**.

"Jayme spent time with people across the team individually to understand how we work, then came back with a detailed breakdown of where AI would be useful and how it should be set up across the business. She then built and implemented the system for us: our company and client knowledge, business strategy, positioning and templates built in, with each person's setup tailored to their role. People picked it up quickly because it was built around their actual work, and several of the team have since developed their own tools with it, including a live client-facing reporting platform and a deal-tracking tool, which they would never have been able to do previously. I'd be very happy to recommend Jayme to another team considering similar work."

Bespoke Software & Systems

For valuable business problems that cannot be solved with an off-the-shelf tool.

We work with the business to understand the commercial problem, the real workflow, the available data and the decisions the system must support. We then design, build, test and implement it around how the business actually operates: websites, client-facing tools and diagnostics, internal systems and specialist software.

THIS CAN INCLUDE

- Problem and opportunity definition.
- Industry and user research.
- Workflow and data design.
- Product strategy and prototyping.
- Live testing and implementation.
- Ongoing refinement.

BUSINESS TRACKER

Systems built for clients can include Studio Baggio's bespoke Business Tracker.

It brings together engagement from guides, diagnostics, email, LinkedIn and other channels, then adds current professional and company information to show who each person is and why they may matter.

Each contact is qualified against the business's commercial priorities, with a clear rationale and recommended next action. Depending on the objective, the system can prioritise prospective clients, existing relationships, introducers, journalists or strategic partners.

EXAMPLE

Studio Baggio designed and built Last30Days, an AI research product that analyses recent conversations across social and community platforms and turns them into structured market intelligence. It has now been used by **more than 250 individual and corporate users** to research markets, competitors, customer questions and emerging opportunities.

What clients say

"There's a lot of noise around AI at the moment, but Studio Baggio takes a refreshingly different approach by helping expert-led businesses turn their expertise into real commercial advantage, in a way that still feels authentic and true to them."

Charlotte Evans MBE · Financial Planner

"Jayme has a rare ability to bridge technology, marketing and commercial growth in a way that actually makes sense to advisers. The result was meaningful visibility that translated into conversations, introductions and new clients."

Harry Sims APFS · Chartered Financial Planner, Fairstone Wealth Management Ltd

"Jayme was fantastic. The positioning strategy and business model she put together were first class. It was clear why she is leading the way in this space. Strongly recommend."

Luke · Head of Growth, independent financial advisory firm
